

ABSTRACT OF THE DISCLOSURE

A connector for connecting elongated enclosures of a wire and/or cable enclosure system, includes: a manually bendable pleated body having first and second ends; a first coupling member extending from the first end of the body, for attaching one of the elongated enclosures to the connector; and a second coupling member extending from the second end of the body, for attaching another one of the elongated enclosures to the connector. The pleated body allows the connector to be manually bent from side-to-side and/or front-to-back, and/or be manually lengthened or shortened to provide a desired configuration.
